(54) Title: OPTICAL FILM STRUCTURE, ILLUMINATION APPARATUS AND LIQUID CRYSTAL DISPLAY DEVICE

**WO 2004/068207 A1**

(57) Abstract: To provide an optical film structure useful in a liquid crystal display device and capable of using thin optical films without warp and distortion. An optical film structure comprises at least one optical film, at least four film fixing parts arranged at an outer peripheral portion of the optical film, a film tension controlling member fitted at one of the ends thereof to each of the film fixing parts in such a fashion as to be capable of pulling the optical film under tension while maintaining flatness of the optical film, and a film fixing frame to which the other end of the film tension controlling member is connected and which fixes the optical film.
